

STUDENT PERFORMANCE ANAYSIS USING POWER BI

An interactive Power BI dashboard designed to analyze student performance and provide meaningful insights through data visualization

Submitted by : Saniya

Internship : Data Anaysis Intern

Organization : SyntexHub

Tool use : Microsoft Power BI

PROJECT OVERVIEW

The objective of this project is to analyze student performance using Microsoft Power BI. The dashboard helps identify patterns in attendance, study hours, study methods, parent education, and school type to support better decision-making.

Dataset Information

Dataset Name: Student Performance Dataset

File Format: CSV

Total Records: 25,000

Total Features: 16

Tool Used: Microsoft Power BI

Data Cleaning Process

- Imported the dataset into Power BI
- Checked for missing values.
- Verified duplicate records.
- Verified data types.
- Prepared the dataset for visualization.

Tools Used

Microsoft Power BI

Microsoft Excel (CSV Dataset)

Dashboard & Visualizations

Dashboard Analysis

Key Insights

Total Students: 25,000

Average Overall Score: 64.01

Average Attendance Percentage: 75.08%

Average Study Hours: 4.25 Hours

Grade distribution shows that most students achieved middle-to-high grades.

Parent education and study methods influence student performance.

Conclusion

This project demonstrates how Power BI can be used to transform raw student data into meaningful insights through interactive dashboards. The analysis highlights the impact of attendance, study habits, parent education, and school type on student performance
